OpenTRV

More comfortable homes for less
money, the open source way

Damon Hart-Davis
Project Lead

openTRV

Old and New

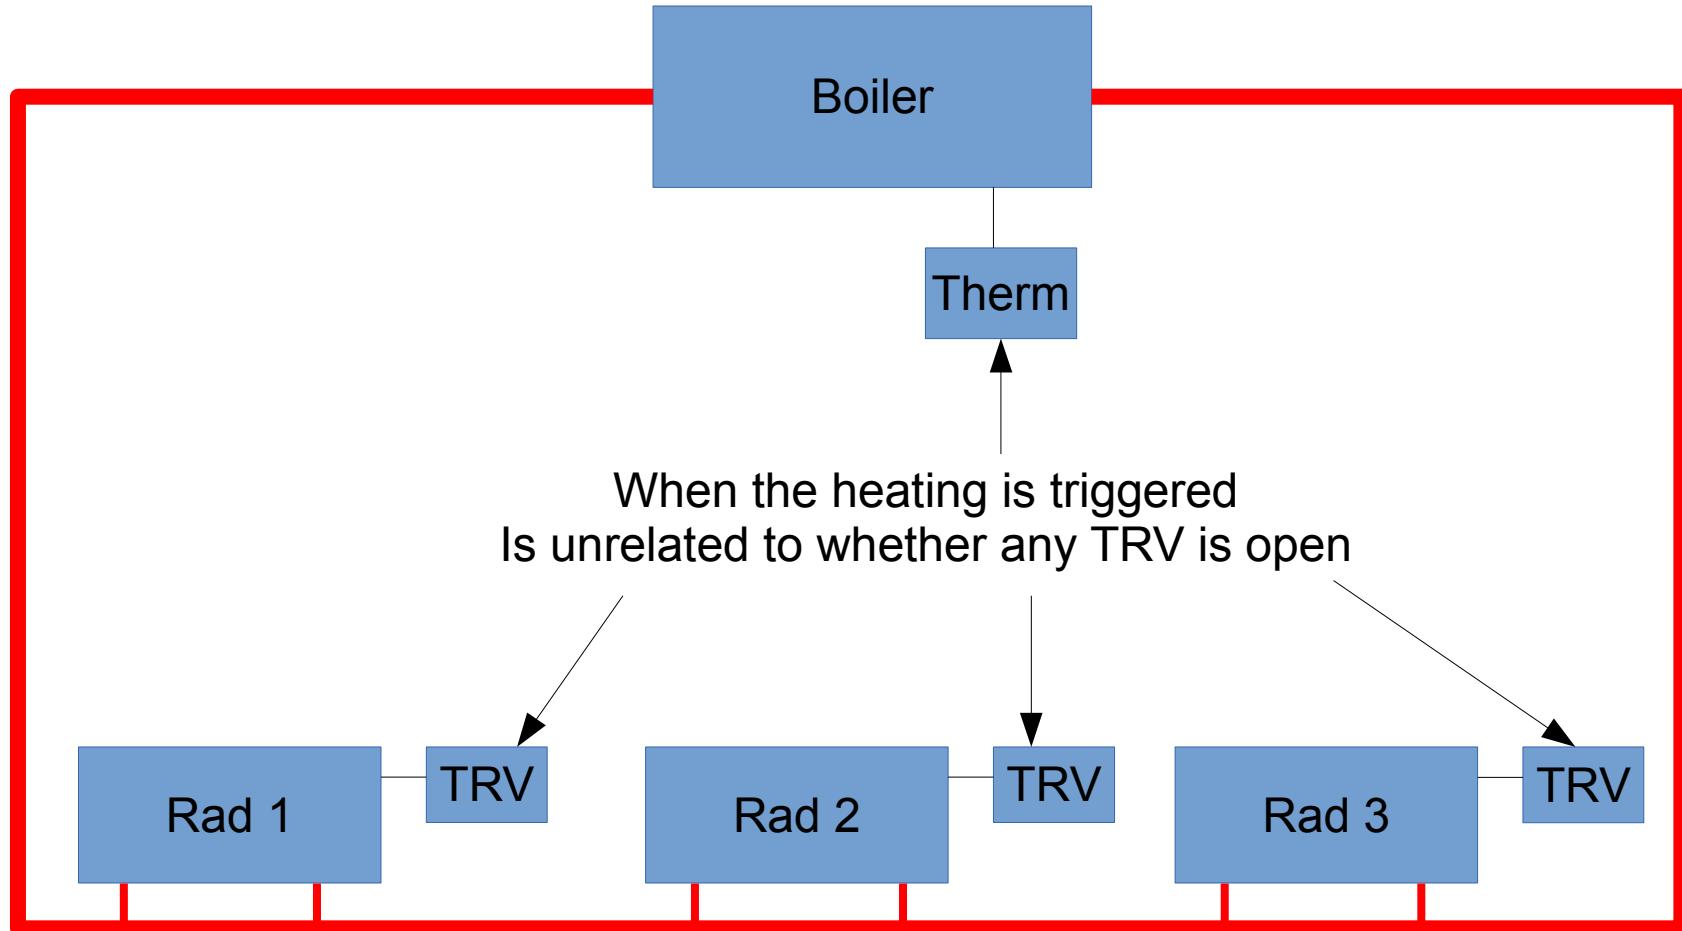

openTRV

What is OpenTRV for?

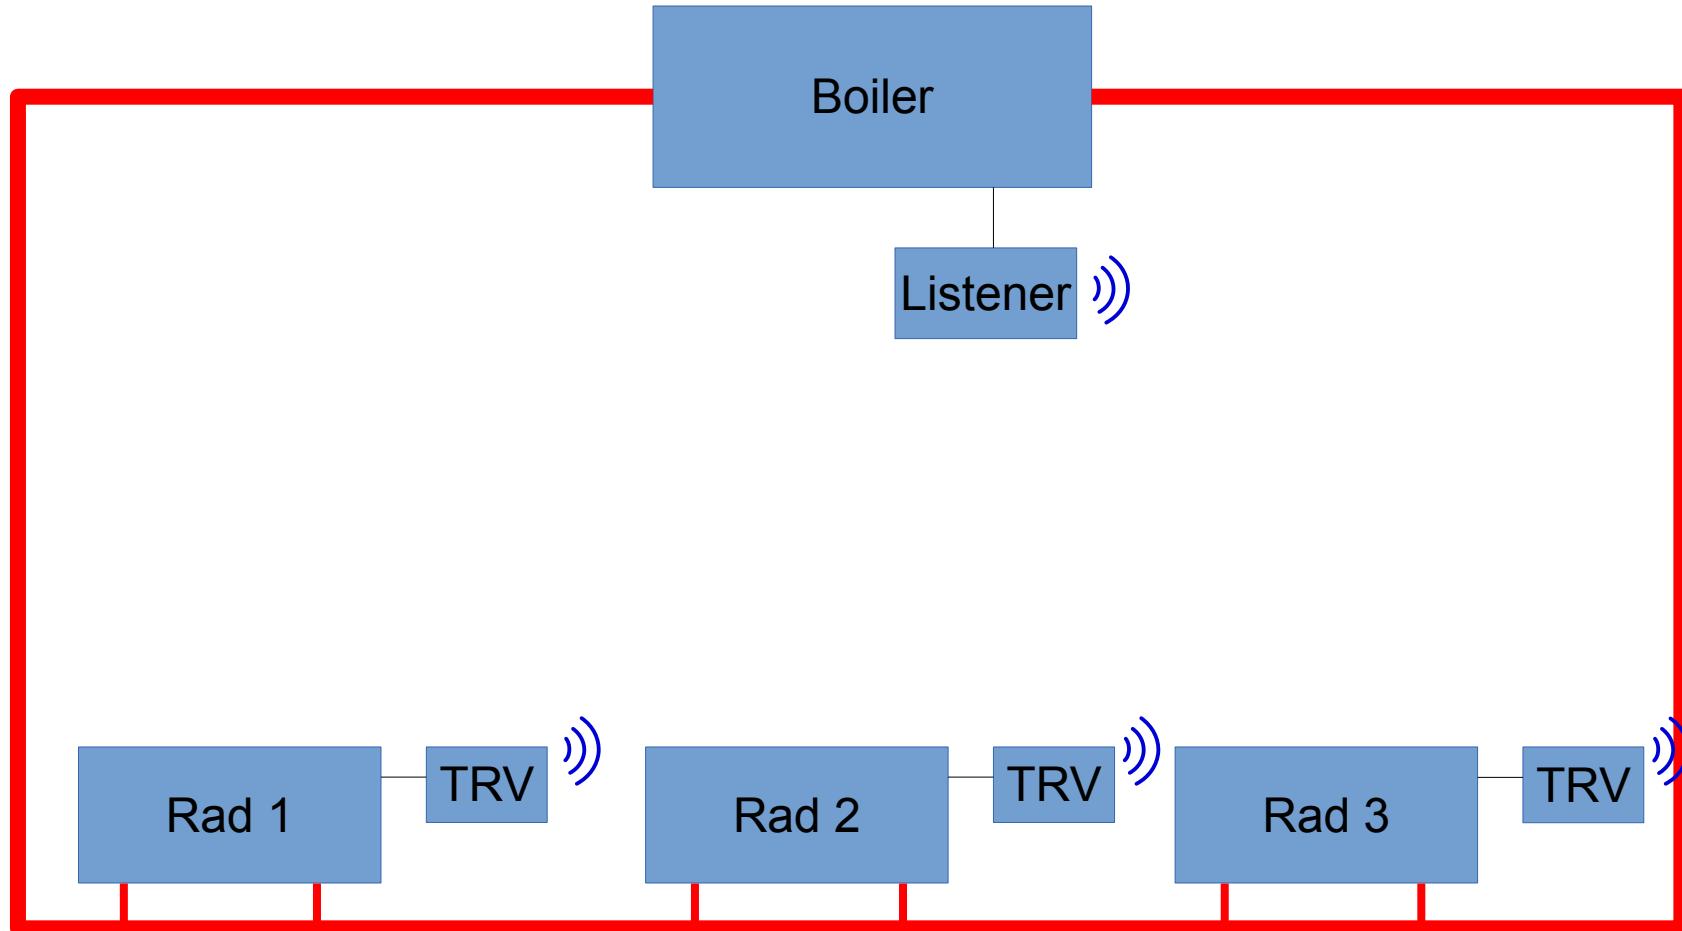

- Heating is 60% of UK domestic energy consumption (DECC)
= 20% of UK carbon footprint
- **Retrofit** is only practical solution
 - 20m UK homes extant in 2050
- 60% of £1400 * 20m homes = £17b/year
- Most homes in the UK are heated via central heating with gas boiler
- Most people heat empty rooms
- Better: a cosy warm **bubble of heat** that follows you around your home

Naive Heating

openTRV

Smart Heating

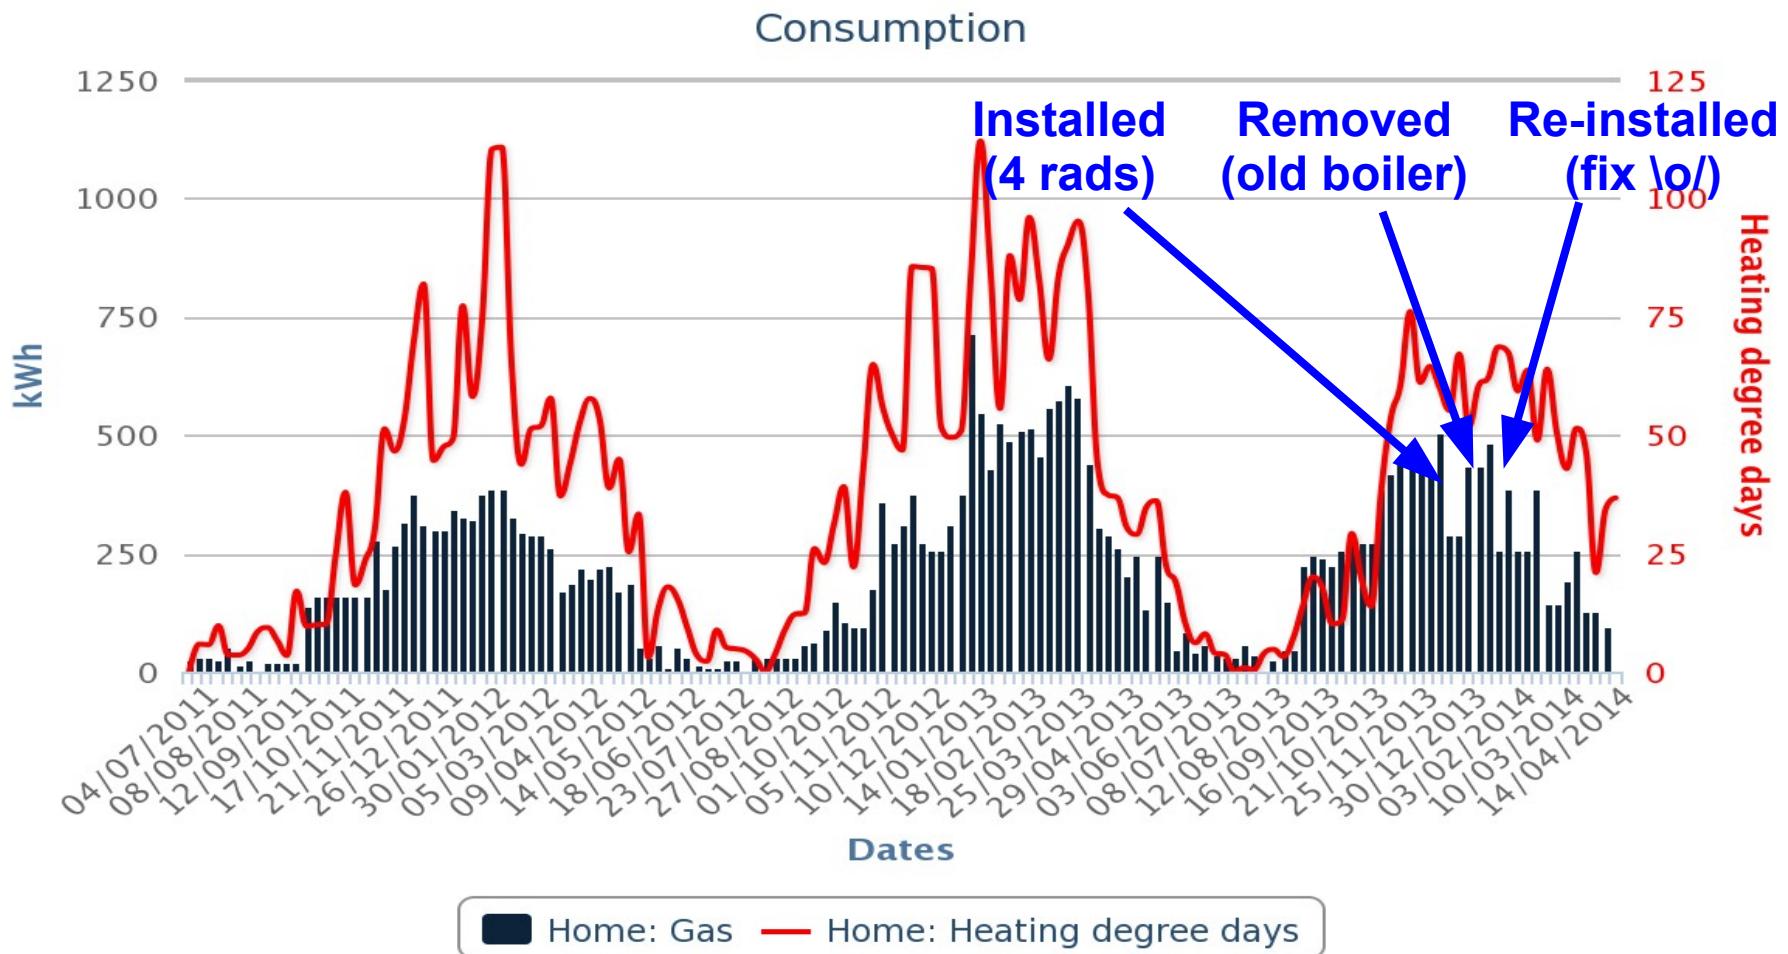

openTRV

Smart Heating How?

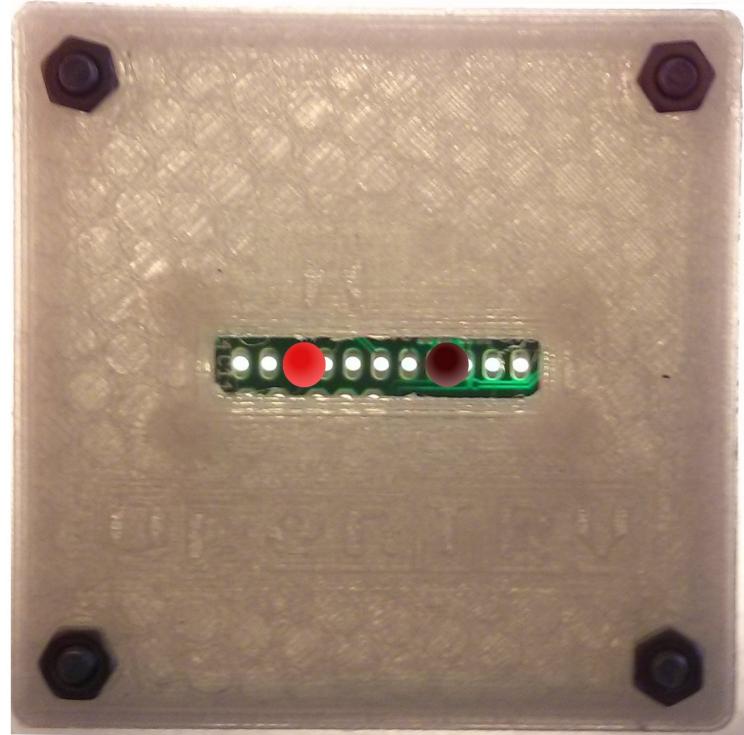

- Zoning: ~50% savings possible
- Occupancy Sensing
- Anticipation: saving becomes delightful
- Cheap: ~£10/room
- Simple: Internet NOT required
- Interoperable for mix-n-match

Does it Work?

OpenTRV

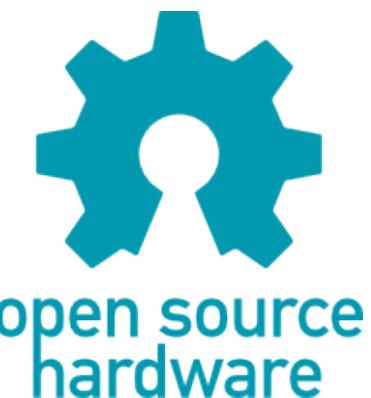

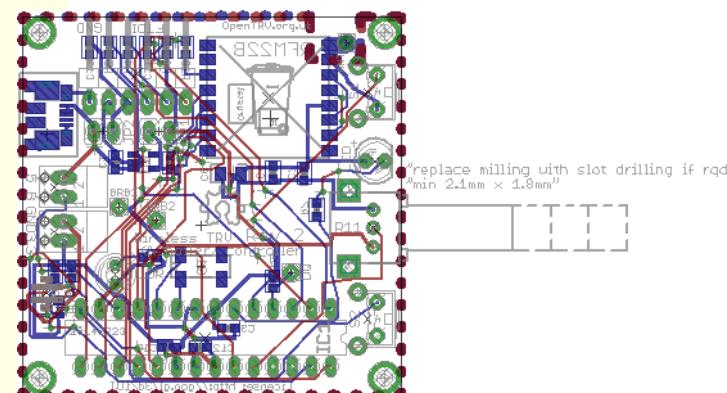

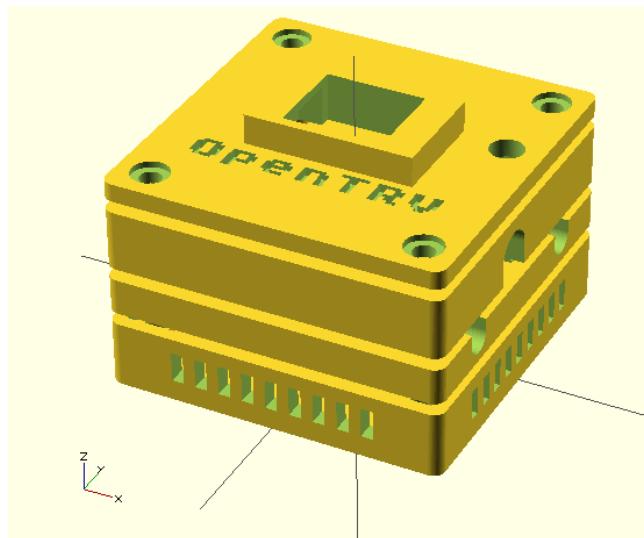

- Easy to use
 - Can a 4 year old use it?
- Low cost (~£100/house)
- Retrofit
- No special skills needed

Mass market product

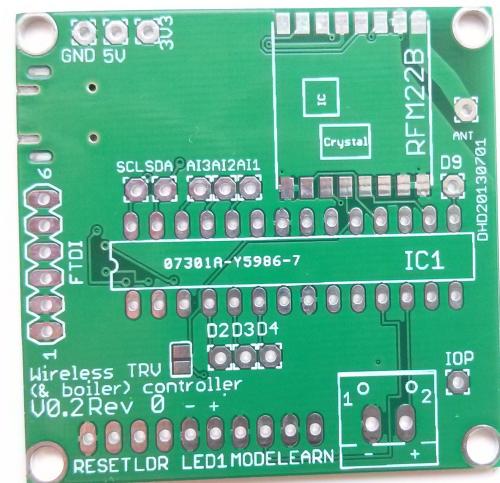

Giving it away

- Open source software (Apache)
- Open source hardware (Solderpad)
- Open source 3D box design (Apache)

Current state

- PCB design: Eagle (fourth revision)
- Microcontroller software
 - Early versions: PICAXE
 - Current version: ATmega
- Documentation
- Mailing lists
- IRC
- Web sites
- 3D box design: OpenSCAD

tvrrug.org.uk

openTRV

Experiences

- Interest worldwide – recent enquiries from e.g. NL, Spain, Germany, UK
- Connecting Homes (3rd prize!)
- Dynamic Demand Hackathon
- Engaging with energy retailers
- Engaging with academia
- Engaging with government

Future

- Trials (does it do what we say on the tin?)
- IoT: optional Internet / smartphone connectivity (emoncms?)
- New efficient and secure open protocol
- Own valve driving hardware 2014
- Hobbyist/DIY kits for sale 2014
- Help wanted (Foundation?):
 - Lawyer
 - Industrial / mechanical design engineer
 - Front-end / web site developer
